

Commercial Exchange Solutions

Protect Your Marketplace Risk Scores

Dynamic is the leading enterprise software and solutions company for Plans that manage government regulated lines of business. With the introduction of the government Health Insurance Exchange Marketplace, participating commercial Health Plans are now required to submit data to the government for Risk Adjustment, Reinsurance and Risk Corridor payment methodologies. HHS/CCIIO is requiring Health Plans to submit three data types: Member, Medical, and Rx Claims data to calculate these payments.

HHS/CCIIO's data collection approach uses a distributed collection model rather than a centralized model used in other government programs such as Medicare Advantage. They have issued detailed requirements for data collection and transmission, provisioning physical edge servers, transforming data to HHS compliant data sets, and receiving responses for data submitted. Dynamic's Voyager® software can assist Health Plans that do not have the capacity to create a full-scale solution for the data submission/response process to stay compliant under these requirements.

Smart Risk Adjustment & Reinsurance

Plans need an effective reporting process in order to receive the premiums and reinsurance dollars to which they are entitled. Plans that under report their risk scores may incorrectly appear to have a healthier population than they actually do and will be required to transfer payments to Plans with less healthy populations. Additionally, Plans that under report their medical and drug spending will not receive their full reinsurance payments which may impact their ability to provide benefits at more competitive premiums. Voyager® helps Plans accurately submit risk scores and spending data to reduce the financial impact resulting from inaccurate reporting.

Smart Compliance

The overall goal of a government regulated Health Plan is to remain compliant. Plans who do not report their data accurately and in a timely manner will be out of compliance and could ultimately lose their ability to conduct business in the Exchange Marketplace. Dynamic's dedicated resources will assist your Plan in remaining compliant throughout the collection and submission processes.

Product Features

Voyager Database

Security: Role-based security allows Plans to meet their HIPAA and SOX security and privacy requirements

Web Application: Voyager uses the latest in JAVA and web based enterprise software technologies, so Plan IT departments are largely unaffected by leveraging existing investments in hardware, software and user training

Integrated Data Model: Voyager's integrated data model allows Voyager modules to share data and provide a 360 degree view of the membership

Data Collection

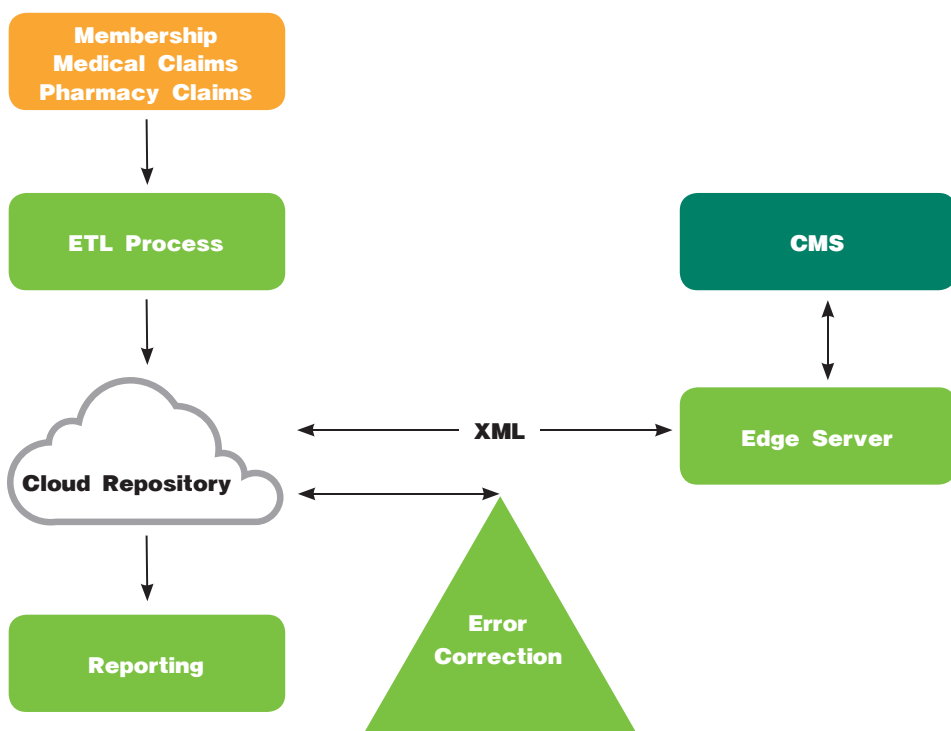

- Extract, transform and load data in various formats and locations into a normalized data repository
- Store, track and status submissions, response data and error corrections
- Supports data privacy requirements (i.e. beneficiary ID masking and external cross referencing)
- The entire data processing chase supports automated intake, export and reconciliation processing

Submission & Response

- Submit required data in standard file formats
- Import and process standard reply files
- Track data correction and trigger resubmission
- Reconcile all submission and response files

Edge Hosting

- Host or contract a third party to host a physical edge server, provisioned with the required government data processing software
- Dynamic provides coordination between CMS and the Edge Server for maintenance and upgrades

Government Health Plans Need Focused Solutions.

Dynamic Healthcare Systems understands the challenges government regulated Health Plans face. Contact us today to learn how our focused solutions can help solve your business problems in today's ever-changing healthcare environment.
